PROFESSIONAL SUMMARY

Senior Python & AI Engineer with 4+ years of experience building scalable backend architectures and AI-driven solutions. Currently serving as a Tech Lead at Openxcell, where I lead a team of 20 developers, driving system architecture, technical strategy, and end-to-end client delivery for an enterprise-grade AI Operating System built on microservices. Skilled in FastAPI-based microservice architecture, Cursor, Gemini 3.5 Flash, Opus 4.6, GPT-4, and LangChain. Proven track record of delivering production-ready REST APIs, document AI pipelines, and highly scalable backend systems for real-world enterprise applications.

WORK EXPERIENCE

Openxcell | Next-Gen AI Services

July 2025 – Present

Software Engineer → Tech Lead | Ahmedabad, India

- Promoted to Tech Lead within 3–4 months of joining; currently leading a team of 20 developers on a large-scale enterprise project, demonstrating rapid growth, ownership, and strong architectural decision-making.
- Leading backend engineering efforts across microservices architecture, driving system design, code quality, performance optimization, and mentoring junior developers.
- Architected and delivered scalable backend microservices for *Kairos OS*, an enterprise Operating System built using FastAPI, PostgreSQL, Redis, Docker, and Azure—strengthening expertise in distributed systems and cloud-native design.
- Designed 12+ microservices optimized for high availability, fault tolerance, and scalability, leveraging event-driven architecture, async processing, caching, and resilient system design patterns.
- Quickly onboarded and mastered a complex microservices codebase within 2 months, enabling effective leadership in design reviews, cross-service integration, and technical roadmap execution.
- Acted as the primary client-facing technical lead, translating business requirements into scalable engineering solutions and long-term architectural strategies.

Samcom Techno Brains Pvt. Ltd.

March 2022 – June 2025

Python Developer → Senior Python Developer | Ahmedabad, India

- Progressed from Python Developer to Senior Python Developer, taking on increased ownership in system design, client delivery, and mentoring junior engineers.
- Designed and deployed AI-powered voice marketing agents using Vapi.ai with dynamically prompt-engineered call flows across real estate, insurance, and solar domains, improving lead conversion by 25%.
- Built an AI-driven email generation platform by integrating GPT-4, enabling personalized, context-aware business communication with dynamic tone and persona control via FastAPI.
- Architected an end-to-end Document AI pipeline, including OCR extraction, ML-based classification, NER field extraction, and a human-in-the-loop annotation system for continuous model improvement.
- Engineered a real-time import/export consignment tracking system with third-party API integrations, automated ICEGATE customs workflows, and DSC-based digital signing for regulatory compliance.
- Improved backend performance and scalability by implementing asynchronous task processing using Celery and Redis, significantly increasing throughput and reducing API latency by 40%.

KEY PROJECTS

Kairos Operating System

FastAPI · Microservices · PostgreSQL · Redis · Docker · Azure Services

- Leading backend development of an enterprise-grade Operating System, driving architecture decisions across 12+ microservices as Tech Lead.
- Designed a system where the process of construction and maintenance of any kind of property is managed by Kairos OS, where vendors, contractors, property owners and kairos employees can work together more efficiently.
- Automated task management system which manages the notification triggers on various events like project and work order creation, work assignment, completions and approvals.
- End to end flow implemented to the work done by vendors and require approvals from admins with quality checks with invoice generation of completed line items by vendors.

- Improved system performance and reliability through query optimization, caching layers, and resilient distributed system design patterns.
- Collaborating cross-functionally to define technical roadmap, system integrations, and long-term architecture for multi-tenant enterprise use cases.

AI Marketing Voice Agents

Vapi.ai · Prompt Engineering

- Developed real-time AI voice agents for outbound marketing campaigns with optimized conversational flows for engagement and lead conversion.
- Designed dynamic prompt strategies to adapt conversations across multiple domains including real estate, insurance, and solar.

AI Email Writer

FastAPI · Langchain · OpenAI GPT-4

- Built an LLM-powered email generation system with dynamic persona and tone control, enabling context-aware business communication.
- Implemented prompt engineering strategies and multi-model orchestration to improve response quality and relevance.
- Enabled real-time streaming responses for improved user experience and reduced perceived latency.

Xemi — Import & Export Automation Tool

Django REST Framework · FastAPI · Microservices · Celery · PostgreSQL · AWS

- Developed a full-scale SaaS platform for import-export automation, integrating third-party systems including ICEGATE for customs compliance and regulatory workflows.
- Engineered real-time shipment tracking and document processing pipelines, handling complex multi-party interactions across logistics stakeholders.
- Designed AI-driven document processing modules for automated extraction, validation, and compliance checks across diverse trade documents.
- Built scalable backend systems supporting workflow automation, status tracking, and seamless coordination between importers, exporters, and logistics partners.

TECHNICAL SKILLS

AI Tools & Models	LangChain, OpenAI GPT-4/4o, Gemini 3.5 Flash, Claude Opus 4.6, HuggingFace Transformers, pgvector, RAG Pipelines (Embeddings + Vector Search), Cursor, Claude Code, GitHub Copilot
ML Libraries	TensorFlow, Scikit-learn, Pandas, NumPy
Languages	Python, JavaScript, HTML, CSS
Frameworks	FastAPI, Django, Django REST Framework
Databases	PostgreSQL, MySQL, Redis, pgvector
Cloud & DevOps	AWS (S3, Lambda, EC2), Azure, Docker, CI/CD Pipelines
Architecture	Microservices Architecture, RESTful APIs, Async Task Processing (Celery + Redis), Event-Driven Architecture
Other	OCR & Document AI, DSC Integration, Third-party API Integration, Git

EDUCATION

Diploma in Information Technology

R.C. Polytechnic Institute

Graduated March 2022

CORE STRENGTHS

- | | |
|---|---|
| – Technical Leadership & Team Mentorship | – Rapid Learning in New AI/ML Technologies |
| – System Design & Architecture Planning | – Detail-Oriented Code Quality & Security |
| – Client Communication & Stakeholder Mgmt | – Agile Delivery in Fast-Paced Environments |
